

# **FP7 2 NMI3**

## **Business Meeting**

### **Work Package 21**

#### **Detectors**

**Nigel Rhodes STFC ISIS**

**FRM II 29 November 2013**

# WP 21 Detectors

**Aim: Development of Large Area Neutron Detectors for Neutron Scattering Application without using  $^3\text{He}$**

**Two technologies selected for development**

**Task 21.1**

**Development of scintillation detectors**

**Julich ISIS CNR**

**Task 21.2**

**Development of gas detectors based on solid  $^{10}\text{B}$  converter**

**TUM HZB BNC CEA**

**Observers ILL and ESS**

# WP 21 Detectors

## Structure of Task 21.1

### Task 21.1 Development of scintillation detectors

Mainly concerned with ZnS/<sup>6</sup>LiF scintillation detectors + WLS fibre readout

#### Divided into 5 sub tasks

21.1.1 Detector Hardware development

21.1.2 Electronics hardware development

21.1.3 Signal processing development

21.1.4 Evaluation of SiPM potential

21.1.5 Evaluation of final detectors and report

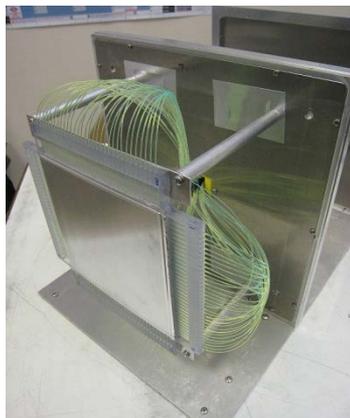

# WP 21 Detectors

## Task 21.1: Development of scintillation detectors

### 21.1.1 Detector Hardware development

D 21.1,2,3 Month 24

### 21.1.2 Electronics hardware development

D 21.4 Month 24

D 21.5,6 Month 36

### 21.1.3 Signal processing development

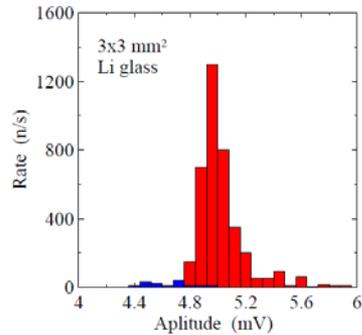

D 21.7 Month 36

Signal processing algorithms which determine how well the detectors will perform

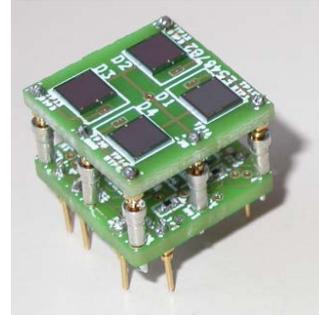

### 21.1.4 Evaluation of SiPM potential

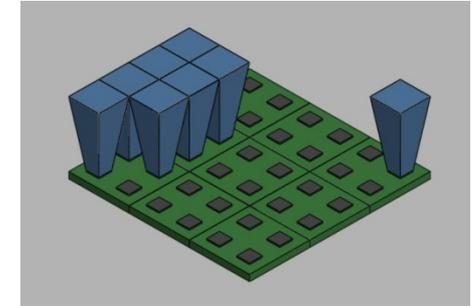

Prototype detector

Experimental Results

Stackable Electronics

Stackable Detector Concept

D 21.8 Interim report due Month 24

21.1.5 Evaluation of final detectors and report

D 21.9 Due Month 48

# WP 21 Detectors

## Structure of Task 21.2

### Task 21.2 Development of gas detectors based on solid $^{10}\text{B}$ converter

#### Divided into 4 sub tasks

21.2.1 Optimisation of substrate and  $^{10}\text{B}$  production parameters

21.2.2 Exploration of alternative production techniques

21.2.3 Measurements with a test detector

21.2.4 Concept study for a large area detector

a) Based on macro grooved structures with wire readout

b) Based on layered structure with micromegas readout

# WP 21 Detectors

## Task 21.2: Development of gas detectors based on solid $^{10}\text{B}$

### 21.2.1 Optimisation of substrate and $^{10}\text{B}$ production parameters

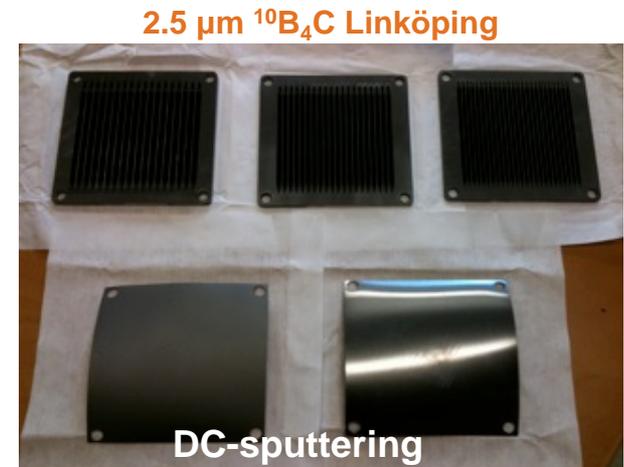

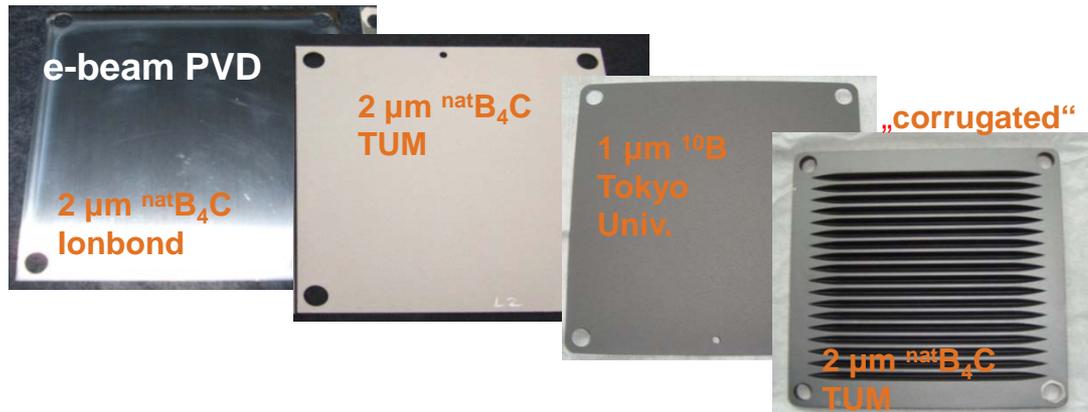

Linköping solved many production issues before JRA began

Lead role switched from HZB to TUM

TUM measured neutron performance of variety of films

Little difference between manufacturer or technique

Linköping able to supply high quality research quantities

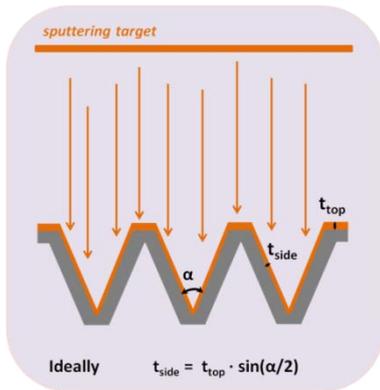

# WP 21 Detectors

## Task 21.2: Development of gas detectors based on solid $^{10}\text{B}$

### 21.2.1 Optimisation of substrate and $^{10}\text{B}$ production parameters

#### TUM Developed Macro structured converter

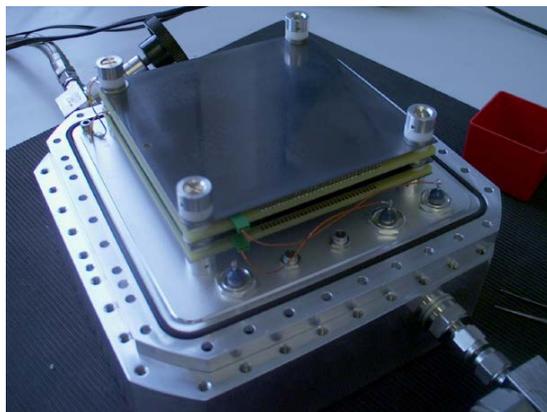

Gives 40% increase in efficiency of flat layer

Almost complete – aging study underway

D 21.10 Report due Month 36

D 21.13 Report due Month 36

### 21.2.3 Measurements with a test detector

Measurements carried out with

Small test detector designed and built for JRA

D 21.12 Month 12 Complete

# WP 21 Detectors

## Task 21.2: Development of gas detectors based on solid $^{10}\text{B}$

### 21.2.2 Exploration of alternative production techniques

HZB Leading this task

D 21.11 Month 36 Report

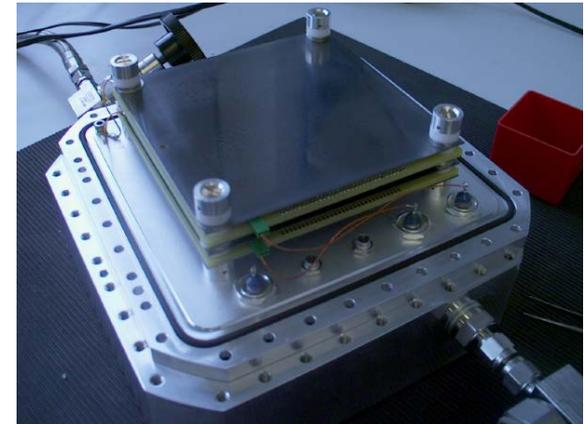

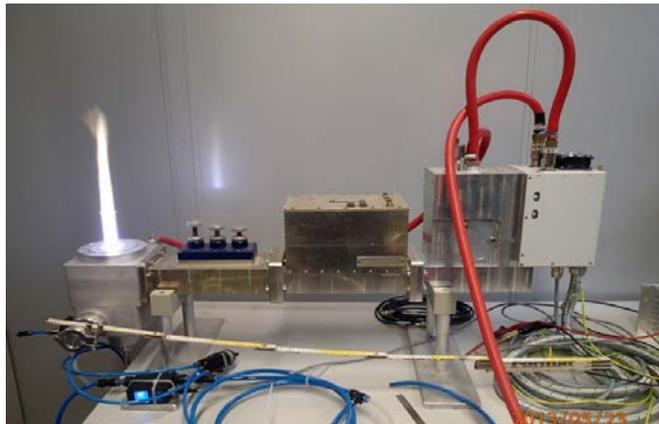

Explored a variety of alternative techniques

Thermal plasma powder spray deposition selected

Required parameters for deposition calculated

Equipment now delivered

New 2D PSD to be produced in collaboration with BNC for layer evaluation

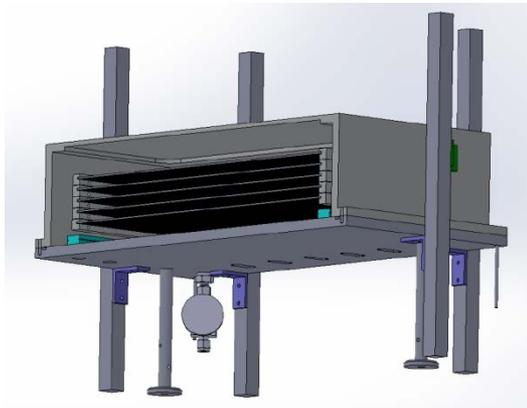

# WP 21 Detectors

## Task 21.2: Development of gas detectors based on solid $^{10}\text{B}$

### 21.2.4 Concept study for a large area detector

#### a) Based on macro grooved structures with wire readout TUM

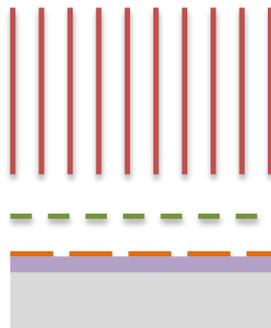

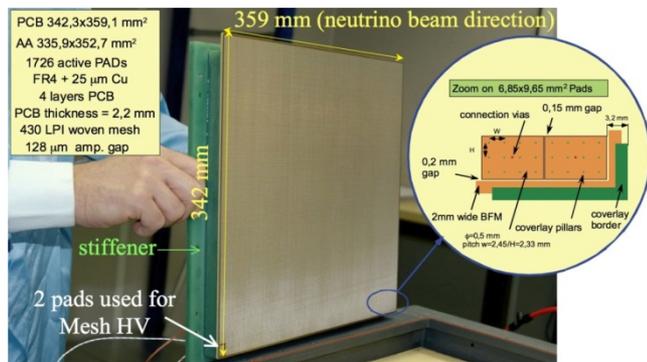

The demonstrator will incorporate a stack of 3 macro structured planes and 2 wire planes

Change from extruded tube concept

Components in production

#### b) Based on layered structure with micromegas readout LLB

Recruitment difficulty

Post doc now started  
Oct 2103

D 21.14 and D 21.15 Month 48

# WP 21 Detectors

## Task 21.1 Development of scintillation detectors

21.1.1 Detector Hardware development

21.1.2 Electronics hardware development

21.1.3 Signal processing development

21.1.4 Evaluation of SiPM potential

21.1.5 Evaluation of final detectors and report

## Task 21.2 Development of gas detectors based on solid $^{10}\text{B}$ converter

21.1.1 Optimisation of substrate and  $^{10}\text{B}$  production parameters

21.1.2 Exploration of alternative production techniques

21.1.3 Measurements with a test detector

21.1.4 Concept study for a large area detector

a) Based on macro grooved structures with wire readout

b) Based on layered structure with micromegas readout
